

PENDING CLAIMS
 Application No. 10/012,029
 Attorney Docket No. 05725.1003-00000
 Filed: December 11, 2001

1-126. (Cancelled)

127. (Previously presented) A method of lengthening eyelashes, comprising:
 applying to the eyelashes an effective amount of a mascara comprising a composition
 comprising, in a physiologically acceptable medium:

at least one first polymer of formula (I):

in which:

- n is an integer which represents the number of amide units such that the
 number of ester groups present in said at least one structuring polymer ranges from
 10% to 50% of the total number of all said ester groups and all said amide groups
 comprised in said at least one structuring polymer;

- R¹, which are identical or different, are each chosen from alkyl groups with at
 least 4 carbon atoms and alkenyl groups with at least 4 carbon atoms;

- R², which are identical or different, are each chosen from C₄ to C₄₂
 hydrocarbon-based groups with the proviso that at least 50% of R² are chosen from C₃₀
 to C₄₂ hydrocarbon-based groups;

- R³, which are identical or different, are each chosen from C₂ to C₃₆
 hydrocarbon-based groups; and

- R^4 , which are identical or different, are each chosen from hydrogen and C_1 to C_{10} alkyl groups, with the proviso that at least 50% of all R^4 are chosen from hydrogen; and

a dispersion of particles of at least one second polymer that is film-forming and insoluble in said medium.

128. (Cancelled)

129. (Previously presented) The method according to Claim 127, wherein the at least one first polymer has a weight-average molecular mass ranging from 1,000 to 30,000.

130. (Previously presented) The method according to claim 127, wherein the at least one first polymer is chosen from ethylene diamine/stearyl dimer tallate copolymer.

131. (Previously presented) The method according to claim 127, wherein R^2 , which are identical or different, are each chosen from C_{10} to C_{42} hydrocarbon-based groups.
